

Flag, Lower, Optimize, and Work Effectively to Improve Lipid Levels and Enhance Post-MI Management

An Innovative, Practical Program on Post-MI Co-Management

Join us for an accredited on demand program introducing the **Post-MI Flow Sheet**—a standardized tool developed to **empower primary care** to schedule timely follow-ups, intensify LLT, and ultimately work with the specialist to help **reduce CV risk**. We will **explore the guidelines** informing the Flow Sheet, **illustrate how to use it** through a patient case discussion, and learn how to **incorporate it into your EMR**.

Objectives

Upon completion of this program, participants will be able to:

Transform Canadian **guidelines** into clinical **management** of the **post-MI patient**

Translate the **evidence** to support optimal care of the MI Patient **to adoption** of the **Post-MI Flow Sheet**, with a focus on lipid lowering

Implement the **Post-MI Flow Sheet** into patient management and **clinical practice**

Presenters

Milan Gupta
MD, FRCPC, FCCS, FACC

Vivien Brown
MDCM, CCFP, FCFP, NCMP

Target Audience Canadian family physicians
